I would like to install a printer driver for my Konica Minolta PagePro 1580MF. I've tried multiple places to download the driver but i keep getting a "Fatal: could not open input file". Does anyone know how to fix this? Thanx A: First your printer isn't a true USB device, it's an Ethernet device. To make it work you have to install an adaptor, you can find one here. Next you have to download the driver for your printer : A1. Driver Printer Canon MF-1110COPIER DRIVER B1. Driver Printer Faxline FaxProfessional GP210 Next on Windows XP the print driver should be in the following folder: C:\Program Files\Common Files\Konica Minolta\Direct Connect Client\Network Drivers The same on Windows 7 it's in C:\Program Files\Konica Minolta\Direct Connect Client\Network Drivers Now you have to install the driver. Just follow the instructions in the Install Canon Printer below NOTE :If your printer was not detected correctly by the Web Interface you may have to reinstall the driver. F1. Install printer Canon MF-1110COPIER F2. Automatic installation
